

ACADEMIC REGULATIONS

Sample Educational Document for RAG Chatbot Testing

Institution: Greenfield Institute of Technology

Academic Year: 2026–2027

1. Purpose and Scope

These sample Academic Regulations describe the academic structure, credits, assessment, passing requirements, progression, and related academic procedures for undergraduate students.

This document is fictional and is intended for testing the Domain-Specific RAG Chatbot.

2. Course and Credit Structure

Each course is assigned a credit value based on its instructional workload. A semester may contain theory courses, laboratory courses, project work, seminars, or other approved academic components.

Students must complete the credits prescribed for their programme before graduation. The exact programme credit requirement is determined by the approved curriculum.

3. Internal Assessment

Internal assessment may include tests, assignments, laboratory performance, presentations, quizzes, attendance-related academic components, or other activities specified by the course instructor.

The method and weight assigned to each internal assessment component should be communicated to students at the beginning of the course.

4. Passing Requirements

A student is considered to have passed a course when the student satisfies the minimum passing requirements specified for that course and programme.

Students must complete required academic components, including practical or laboratory components where applicable. A student who does not satisfy a required component may need to repeat or reattempt the relevant assessment.

5. Semester Progression

Students are expected to complete the academic requirements of each semester and register for the next semester according to institutional procedures.

Students with outstanding courses may be permitted to continue subject to the progression rules applicable to their programme.

6. Course Registration

Students should register for courses within the registration period announced by the institution. Registration changes after the deadline require approval from the authorized academic office.

Students should verify their registered courses before the final registration deadline and report discrepancies promptly.

7. Attendance and Academic Eligibility

Attendance requirements are governed by the applicable attendance policy. Students should monitor their attendance throughout the semester rather than waiting until the end of the term.

Where an academic activity has a mandatory attendance or participation requirement, students must satisfy that requirement to remain eligible for the associated assessment.

8. Academic Records

Marks, grades, credits, course registrations, and other approved academic information are maintained as part of the student's academic record.

Students should review published results and academic records and report apparent errors through the prescribed institutional process.

9. Graduation Requirements

A student may graduate after completing the required programme credits, satisfying compulsory course requirements, completing required projects or practical components, and meeting other applicable institutional conditions.

Completion of a programme is determined using the officially approved curriculum and academic regulations.
